Data management plans

Are you planning a research project that will generate data? Or do you already have data that you want to save and share according to professional standards? Do your funders require a data management plan? We at the University of Vienna are happy to support you. A data management plan ensures that your research data can be found, accessed, cited and reused even after the completion of a project and is often a prerequisite for the approval of project applications by national and international funding agencies.

Researchers from all disciplines are supported in the management and archiving of their data from collections, research and teaching by the department RDM Repository Management PHAIDRA-Services. PHAIDRA is the repository for the long-term storage of digital collections at the University of Vienna. In addition, we show you the possibilities of short and medium term storage, how to visualize your data, advise on metadata and formats, and offer several upload options.

Researchers from all disciplines of the social sciences can contact AUSSDA - The Austrian Social Science Data Archive. Among other things, AUSSDA supports you in creating your data management plan with the aim of making the data available via AUSSDA's digital repository. AUSSDA is a national research infrastructure that makes social science data accessible and reusable for science and society.

DMPs for all scientific data

In PHAIDRA, the repository for the permanent storage of digital collections at the University of Vienna, you can long-term archive data from all areas and in all formats. The department Repository Management PHAIDRA-Services will be happy to advise you on DMPs of the respective funding agencies (e.g. EU projects) and on the creation of DMPs if you wish to archive your project results in PHAIDRA. The team consults with you about suitable storage locations for your data, survey questions and metadata, upload options, data linking and visualizations. With PHAIDRA you can gradually adjust the visibility of your data at any time, each object automatically receives a handle link and, if desired, a DOI. You can grant licenses, link the objects together in different ways and describe them in several languages. In addition, the PHAIDRA team regularly offers workshops on the creation of data management plans, and the long-term archiving of data through the Human Resources Development department.

- Templates for DMP can be found at https://phaidra.univie.ac.at/o:407975

- If you have any questions about DMPs or research data management in general, contact us at rdm@univie.ac.at or check out the central RDM website: https://rdm.univie.ac.at/

You can find out more about PHAIDRA and our services at: https://datamanagement.univie.ac.at/

Data management plans (DMPs) for social science research

AUSSDA - The Austrian Social Science Data Archive is a national service facility for researchers, teachers and students of the social sciences with the mission of archiving social science data in order to make them accessible and reusable for science and society. Archiving is free of charge and users can usually freely access the data. As a researcher, you decide for yourself who may use your data for which purpose through various licensing models. By assigning a persistent identifier (DOI), all archived data records can easily be found and cited giving your research a higher visibility. In addition to archiving and providing research data, AUSSDA offers support in several phases of the research process, in particular through consulting and training on data management plans in social science projects.

- A template of a data management plan created especially for the social sciences can be found here: https://zenodo.org/record/1291816

- AUSSDA staff will be happy to advise you personally at the University of Vienna, University of Graz and University of Linz or by e-mail at info@aussda.at.

- Further information is available at: https://aussda.at/
